Assessing Medication Problems in those ≥ 65 Using the STOPP and START Criteria 150

Roger E. Thomas

The cover photo schematically reflects the multidisciplinary nature of the journal 'Current Aging Science'. The journal reports diverse research from cellular, molecular, animal and clinical models. The journal, with the articles discussed therein, will help in understanding the biology, genetics and mechanisms of aging, and devising proper interventions for the normal aging process, with the ultimate goal of developing preventive strategies for aging-related disorders.
