Contents

<i>Preface</i>	xvii
<i>Introduction</i>	xix
1. Open-Shell Molecules, Unrestricted Hartree–Fock Formalism, Electron Correlation, and Spin–Orbit Coupling	1
1.1 Introduction: Molecular–Crystalline Dualism of Graphene and the Ground of Its Spin Chemical Physics	2
1.2 Graphene as an Object with Open-Shell Electronic System	5
1.2.1 About Open-Shell Molecules in General	5
1.2.2 Reality of the UHF Peculiarities of sp^2 Open-Shell Molecules	9
1.3 What Is the Origin of the sp^2 OSMs UHF Peculiarities?	11
1.4 Nonrelativistic and Relativistic UHF Formalism	13
1.4.1 Hamiltonian	14
1.4.2 Wavefunctions	15
1.4.3 Analytical Results	15
1.4.4 Computational Justifications	16
1.5 Correlation and Relativity Effects in sp^2 OSMs	18
1.5.1 Phenomenological UHF Peculiarities of sp^2 OSMs	18
1.5.2 Phenomenological Characteristics of Spin–Orbit Coupling in Molecules	21
1.5.3 Para- and Ferrodiamagnetism of sp^2 OSMs	23
1.6 Attempted UHF-Based Determination of SOC Parameters	28
1.6.1 A Confine Collection of Necessary Relations	28
1.6.2 UHF-Based SOC Parameter a^{SO} of sp^2 Nanocarbons	30
1.7 Conclusion	32

2. Stretching and Breaking of Chemical Bonds Leading to Open-Shell Character of Molecular Electronic Systems	41	4. Silicene and Other Heavier Tetrelenes	127
2.1 Introduction	41	4.1 Introduction: Silicene is a Material Phantom	127
2.2 Basic Theoretical Concept	44	4.2 Dirac Fermions in 2D Silicene Crystal	129
2.3 Covalent Bonds in Light of Their Stretching and Breaking	48	4.3 Spin Effects of Silicon-Based Open-Shell Molecules	132
2.3.1 $N_D(R)$ Graphs of C \leftrightarrow C Bonds	48	4.3.1 Peculiarities of the $N_D(R)$ Graphs of C=C, Si=C, and Si=Si Bonds	132
2.3.2 $N_D(R)$ Graphs of C-O, C-H, and F-F Bonds	56	4.3.2 Siliceous Analogues of sp^2 Carbonaceous Molecules	134
2.3.3 $N_D(R)$ Graphs of X \leftrightarrow X Covalent Bonds of Heavier Tetrrels (X=Si, Ge, and Sn)	57	4.4 Last News on New One-Atom-Thick 2D Silicene-Based Material—Si ₂ BN	139
2.4 Statically Stretched Bonds in Covalent Compounds	60	4.5 Silagraphenes	142
2.4.1 General Characteristics Related to Bond Stretching	60	4.6 A Few Comments about Germanene and Stannene	146
2.4.2 Chemically Stretched Covalent Bonds	61	4.7 Conclusion	154
2.4.2.1 Single C-C bonds	61		
2.4.2.2 Double and triple C-C bonds	66	5. Spin Molecular Theory of Graphene Hydrogenation	159
2.5 Evolution of Double and Triple C-C bonds in Diphenylacetylenes, Graphynes, and Graphdiynes	70	5.1 Introduction	159
2.6 Conclusion	76	5.2 A Brief View on Graphene Hydrogenation	161
3. Spin Roots of Dirac Material Graphene	83	5.3 Algorithmic Computational Design of Graphene Polyhydrides	163
3.1 Introduction	83	5.4 Pristine Molecule and the First Stage of Hydrogenation	168
3.2 Relativistic Electrons of Graphene	83	5.5 Two-Side Hydrogen Adsorption on the Basal Plane of Fixed Membrane	170
3.3 Molecular Essence and Topological Character of Graphene Magnetism	92	5.6 One-Side Hydrogen Adsorption on the Basal Plane of Fixed Membrane	175
3.3.1 General Features of Experimental Observations	92	5.7 Comments on Hydrogen Adsorption on Free-Standing Graphene Membranes	178
3.3.2 Magnetic Behavior of Graphene Molecules	95	5.8 Hydrogenation-Induced Structure Transformation of (5, 5) NGr Molecule	180
3.3.3 High-Temperature Ferromagnetic Topological Insulating Phase of Graphene	100	5.9 Energy Characteristics Accompanying Nanographene Hydrogenation	182
3.4 Local Spins in Graphene Molecule Landscape	104	5.9.1 Energetics of the Hydrogenation of NGr Basal Plane	184
3.5 Introduction to Graphene Computational Spin Chemistry	111	5.9.2 Framing and Multistage Hydrogenation of Graphene Molecules	186
3.6 Comments on Converting Graphene from Semimetal to Semiconductor	114	5.9.3 General Regularities	187
3.7 Conclusion	119	5.10 Empirical Evidences, Computational Predictions, and Conclusive Remarks	189

6. Spin Molecular Theory of Graphene Oxidation	195
6.1 Introduction: General Tendencies and Problems	195
6.2 Graphene Oxide Chemistry from the Conventional Computational Viewpoint	197
6.2.1 Morphology	198
6.2.2 Graphene Oxidation as a Process in General	198
6.2.3 Chemical Composition of Graphene Oxide	199
6.2.4 Theoretical and Computational Approaches	200
6.3 Graphene Oxide Chemistry from the Viewpoint of Spin Molecular Theory	202
6.4 First-Stage Oxidation of (5, 5) NGr Molecule	203
6.4.1 Homo-Oxidant Action	203
6.4.2 Hetero-Oxidant Action	206
6.5 Second-Stage Oxidation of the Free-Standing (5, 5) NGr Membrane	207
6.5.1 Oxidation of Hydroxyl-Framed GOs	208
6.5.2 Oxidation of Hetero-Oxidant-Framed GOs	210
6.6 Oxidation-Induced Structure Transformation	210
6.7 Main GO Characteristics and Properties Based on the Computational Experiment	216
6.8 Conclusive Remarks and Comparison with Experimental Data	218
6.8.1 Morphology	219
6.8.2 Graphene Oxidation as a Process in General	221
6.8.3 Chemical Composition of Graphene Oxides	223
6.9 How Does Chemical Modification of Graphene Molecules Affect Electronic Structure?	225
6.9.1 Size-Dependence of Chemical Reactions Final Products	226
6.9.2 Chemically Induced Destruction of Graphene Samples	227
6.10 Conclusion	230

7. Technical Graphene (Reduced Graphene Oxide) and Its Natural Counterpart (Shungite Carbon)	235
7.1 Introduction: Technological Material for Low-Performance Applications	235
7.2 Spin Chemistry of Graphene about Reduced Graphene Oxide	237
7.3 Rediscovery of Shungite Carbon in Light of Spin Chemistry of Reduced Graphene Oxide	242
7.3.1 Shungite as New Carbon Allotrope	243
7.3.2 Structure of Shungite Carbon	244
7.3.3 Shungite Carbon Chemical Composition	247
7.4 Shungite Carbon in View of Molecular Chemistry of Graphene	248
7.4.1 Shungite Carbon Was Caused by Terminated Graphitization	249
7.4.2 Chemical Modification of Graphene Lamellae in Due Course of Geological Time of Life	251
7.4.3 Partnership of Oxidation and Reduction for Shungite Carbon Formation	253
7.4.4 Hydrogenation Completes the Basic Element Chemical Content	255
7.4.5 Shungite Carbon Stacks and Globules	256
7.4.6 Two-Type Shungite Carbon Pores	257
7.5 Conclusive Remarks	260
8. Parent and Reduced Graphene Oxides of Different Origin in Light of Neutron Scattering	265
8.1 Introduction: Neutron Scattering among Other Experimental Techniques	265
8.2 INS Theoretical Background	267
8.3 Neutron Scattering Experiment	271
8.3.1 Neutron Powder Diffraction	271
8.3.1.1 Shungite carbon	271
8.3.1.2 Synthetic GO and rGO products	271
8.3.2 Inelastic Neutron Scattering	275
8.4 Comparative Analysis of Experimental $G(\omega)$ Spectra	276

8.4.1	Retained Water Spectra	276
8.4.2	rGO Spectra	281
8.5	$G(\omega)$ Spectra and Computational Dynamics of GO and rGO	283
8.5.1	Computational Models Used	283
8.5.1.1	{GO + water} model	283
8.5.1.2	rGO models	286
8.5.1.3	About "riding effect" again	287
8.5.2	Calculated INS Spectra of the GO Core and Retained Water	289
8.5.3	INS Spectrum of rGO: Computational Results and Discussion	292
8.6	GO Instability Revealed by INS	294
8.7	Conclusion	297
9.	Spin Mechanochemistry of Graphene.	
1.	Static Deformation and Uniaxial Tension of Nanographene Molecule	301
9.1	Introduction: Graphene Deformation as Mechanochemistry	301
9.2	Static Mechanochemistry of Graphene	303
9.2.1	Bubbles, Wrinkles, and Ripples on the Surface of Graphene	305
9.2.2	Strengthening of Magnetism and Chemical Activity of Deformed Graphene	309
9.3	Mechanochemistry of Graphene under Uniaxial Tension: Basic Grounds	316
9.3.1	Preceding History	316
9.3.2	Mechanochemical Internal Coordinates and Main Mechanical Characteristics	318
9.3.3	Graphene as the Object of Mechanical Deformation	320
9.4	Tensile Deformation and Rupture of Benzene Molecule	321
9.5	Tensile Deformation of (5, 5) NGr Molecule	323
9.5.1	<i>ach</i> Mode of graphene Tensile Deformation	324
9.5.2	<i>zg</i> Mode of Graphene Tensile Deformation	325

9.6	Tensile Deformation of Hydrogen-Terminated (5, 5) NGr Molecule	331
9.7	Topological Character of Electron Correlation in Graphene	333
9.7.1	Bare (5, 5) NGr Molecule	335
9.7.2	(5, 5) NGr-H1 and (5, 5) Ngr-H2 Molecules	337
9.8	Conclusion	339
10.	Spin Mechanochemistry of Graphene.	
2.	Uniaxial Tension of Nanographane	347
10.1	Introduction	347
10.2	Graphane as Computational Object	348
10.3	Nanographane Under Tensile Deformation	350
10.3.1	<i>ach</i> Deformation Mode	350
10.3.2	<i>zg</i> Deformation Mode	353
10.4	Energetic Characteristic of the Graphane Tensile Deformation	356
10.5	Molecular Aspect of Graphane Deformation	361
10.6	Mechanical Deformation and Dynamic Properties	364
10.7	Conclusion	367
11.	Spin Topochemistry of Spatially Extended sp^2 Nanocarbons in General and Graphene in Particular	371
11.1	Introduction: sp^2 Nanocarbons as a New Class of Topochemical Objects	371
11.2	General Regularities of Topochemical Reactions	373
11.2.1	Leitmotifs of Intermolecular Interaction in sp^2 Nanocarbons	374
11.2.2	Spin-Marked Configurations of sp^2 Nanocarbon Composites	376
11.2.3	Energetic Characteristics of Contact Zones of sp^2 Nanocarbon Composites	379
11.3	"Double (C=C) Bond" Topochemical Reactions	380
11.3.1	Fullerene C_{60} +Carbon Nanotube Composites	380
11.3.2	Fullerene C_{60} +Graphene Nanobuds	384
11.3.3	IMI Profiles of sp^2 Nanocarbon Composites	387

11.4	Carbon Nanotube–Graphene Composites	390
11.5	“Atom-(C=C) Bond” Topochemical Reactions	397
11.5.1	Graphene Hydrogenation	397
11.5.1.1	Topochemical aspects of graphene hydrogenation	397
11.5.1.2	Topochemistry of graphene hydrogenation in energetic characteristics	400
11.5.2	Comparative View of the Hydrogenation of Fullerene C ₆₀ and Graphene	402
11.6	Conclusions	404
12.	Photonics of Graphene Quantum Dots	411
12.1	Introduction	411
12.2	Graphene Quantum Dots: General Characteristics	415
12.3	Fractal Nature of the GQD Dispersion	417
12.4	rGO-Sh Aqueous Dispersions	418
12.5	rGO-Sh Dispersions in Organic Solvents	421
12.5.1	rGO-Sh Dispersions in Carbon Tetrachloride	422
12.5.2	rGO-Sh Dispersion in Toluene	425
12.6	General Features of rGO-Sh Dispersions	428
12.7	Optical Spectra of Open-Shell and Closed-Shell Graphene-Based Molecules	431
12.7.1	HF Peculiarities of the Molecules Ground State	434
12.7.2	ZINDO/S Excited States of GO Closed-Shell Molecules	435
12.7.3	ZINDO/S Excited States of rGO Open-Shell Molecules	437
12.7.4	General Remarks Concerning the Interrelation between Experimental and Calculated Optical Spectra of GQDs	438
12.8	Summary and Conclusions	442
	<i>Aposteriori</i> Reflections	451
	<i>Index</i>	457
