<i>J. Kozakiewicz</i> – Limitations in the use of fluorinated greenhouse gases in the production of polyurethane foams and systems . . . . .	663
<i>M. Kurańska, A. Prociak, S. Michałowski, K. Zawadzińska</i> – The influence of blowing agents type on foaming process and properties of rigid polyurethane foams ( <i>in English</i> ). . . . .	672
<i>L. Szczepkowski, J. Ryszkowska, M. Auguścik, S. Przekurat, A. Przekurat</i> – Viscoelastic polyurethane foams suitable for multiple washing processes . . . . .	679
<i>A. Blazejczyk, P. Wierzbicka</i> – Heterogeneous pores distribution in polyurethane expanding foams detected <i>via</i> X-ray computed microtomography ( <i>in English</i> ) . . . . .	685
<i>J. Paciorek-Sadowska, M. Borowicz, B. Czupryński, J. Liszkowska</i> – New bio-polyol based on white mustard seed ( <i>Sinapis alba</i> ) as an alternative raw material for the polyurethane industry . . . . .	694
<i>P. Parcheta, I. Koltsov, E. Głowińska, J. Datta</i> – Thermal degradation kinetics of poly(propylene succinate) prepared with the use of natural origin monomers ( <i>in English</i> ) . . . . .	700
<i>J. Wojturska</i> – Resistance of <i>high solid</i> polyurethane coatings to biotic and abiotic factors . . . . .	708
<i>G. Mitchener</i> – Impact of Grenfell Tower fire disaster on polyisocyanurate industry ( <i>in English</i> ) . . . . .	716
